CSE0001: DIGITAL LITERACY PROJECT

VIT BHOPAL UNIVERSITY

NAME: DIVYANSH AGARWAL

BRANCH: CSE CORE

YEAR: 2025-2029

COURSE CODE: CSE0001

DATE:29th March, 2026

INTRODUCTION

This report documents my journey as a Student Digital Ambassador during my first year of B.Tech (CSE Core).
The goal of this project was to build a strong digital presence, improve communication skills, and understand cybersecurity.
Through various tasks, I developed practical knowledge of professional platforms and responsible internet usage.

By creating profiles on GitHub, LinkedIn, and Kaggle, I have started building my professional identity.
This project also helped me understand cyber threats like phishing and online fraud, making me more aware and cautious online.

TASK-1

In this task, I created an infographic using Canva. The aim was to spread awareness about digital literacy among students.

The infographic included:
- Meaning of digital literacy and its importance
- Useful tools like Google Scholar, Notion, and Quizlet
- Tips for writing professional emails

In this task, I designed an informative infographic using Canva to promote digital literacy among students. The objective was to present essential concepts in a visually engaging and easily understandable format. The infographic covered key topics such as the definition and importance of digital literacy, highlighting how it plays a crucial role in academic and professional success in today's technology-driven world. I also included useful digital tools like Google Scholar for research, Notion for organization, and Quizlet for learning support. Additionally, I provided practical tips for writing professional emails, focusing on clarity, tone, and structure.

This task enhanced my ability to simplify complex information and present it creatively. I learned how visual elements such as icons, color schemes, and layouts can improve communication effectiveness. It also helped me understand the importance of spreading awareness about responsible digital practices among peers. Overall, this activity strengthened my design thinking and communication skills while reinforcing the significance of digital literacy in everyday life.

TASK-2

I created accounts on GitHub, Kaggle, and LinkedIn.

- GitHub: To showcase coding projects
- Kaggle: To explore data science and ML
- LinkedIn: For professional networking

In this task, I created accounts on three important professional platforms: GitHub, Kaggle, and LinkedIn. The purpose was to begin building a strong digital identity and establish an online presence early in my academic journey. On GitHub, I started organizing and uploading coding projects to showcase my technical skills and maintain a portfolio of my work. Kaggle introduced me to the field of data science and machine learning, where I can explore datasets, participate in competitions, and learn from the community. LinkedIn was used to create a professional profile that highlights my academic background, skills, and aspirations while connecting with peers and industry professionals.

This task helped me understand the importance of personal branding and networking in the digital age. It also motivated me to consistently update my profiles and engage with relevant content. Developing these profiles at an early stage will be beneficial for internships and career opportunities. Overall, this task laid the foundation for my professional growth and digital credibility

TASK-3

I chose HackerRank as my primary platform for coding. I successfully completed the beginner-level challenges in Python and earned my Bronze Badge. This practice helped me understand basic Python logic
Additionally, I used Google Forms to build a Digital Literacy Awareness Quiz. I created a Google Form with five specific questions to test how well my batchmates understand online safety, professional email etiquette, and technical tools. I also linked this form to a Google Sheet so I can easily track and analyze the responses.

These tools will be very helpful for my academic success over the next four years. HackerRank will help me prepare for technical interviews and improve my problem-solving skills for my B.Tech courses. Meanwhile, Google Forms and Sheets are essential for my role as a Student Digital Ambassador, allowing me to collect data and share helpful resources with my batchmates effectively.

TASK-4

Poor digital communication can create serious problems. For example, sending emails without a clear subject line may lead to them being ignored.

To avoid this:
- Use clear subject lines
- Maintain polite tone
- Keep messages short and clear

This task focused on understanding the importance of effective digital communication, particularly in professional settings. Poorly written messages, such as emails without clear subject lines or proper structure, can lead to misunderstandings or be ignored entirely. I learned that clarity, tone, and brevity are essential components of successful communication.

To improve my digital communication skills, I practiced using clear and relevant subject lines, maintaining a polite and professional tone, and keeping messages concise and to the point. I also understood the importance of structuring emails properly, including greetings, body content, and closing statements. These practices ensure that the message is easily understood and leaves a positive impression on the recipient.

This task highlighted how communication skills are just as important as technical knowledge in both academic and professional environments. It has helped me become more mindful while writing emails and messages. Overall, this activity improved my ability to communicate effectively and professionally in digital platforms.

TASK-5

While researching cybersecurity, I learned about phishing and UPI fraud.

I realized how scammers use social engineering to trick users. This made me more cautious.

Now I:
- Avoid clicking unknown links
- Use official apps for transactions
- Enable two-factor authentication

In this task, I explored the concept of cybersecurity and learned about common online threats such as phishing attacks and UPI fraud. Through research, I understood how cybercriminals use social engineering techniques to manipulate users into revealing sensitive information. This awareness made me realize the importance of being cautious while interacting online.

As a result, I adopted several safe digital practices. I avoid clicking on suspicious links or messages, use only official and trusted applications for financial transactions, and enable two-factor authentication for added security. These measures significantly reduce the risk of falling victim to cyber fraud.

This task was crucial in developing my awareness of digital safety and responsible online behaviour. It emphasized that cybersecurity is not just a technical issue but also a personal responsibility. Overall, this experience has made me more vigilant and better prepared to protect my digital identity and data in an increasingly connected world.

CONCLUSION

This project has helped me become a more responsible digital citizen.

In conclusion, completing these five tasks has been a transformative experience that significantly improved my professional and technical confidence. Transitioning from a passive user to an active Digital Ambassador has taught me the importance of maintaining a clean digital footprint and practicing safe online habits. Mastering tools like Google Forms for data collection and drafting professional emails has prepared me for future internship opportunities at companies like Microsoft.
